Three-conditioner early response, initial error scale 1

(a) Moving-anchor error versus fixed-clock tracking error

Normalized cycle-start error

10^{0} 10^{-2} 10^{-4} 10^{-6} 10^{-8} 10^{-10}

0.01

daniel, anchor = fixed clock
daniel-relaxed, anchor
daniel-relaxed, fixed clock
marcolino, anchor
marcolino, fixed clock
Open loop

0 5 10 15 20 25

(b) Conditioning activity: distinct quantities, not a shared beta

Applied fraction β_k

0 0.2 0.4 0.6 0.8 1

Marcolino: delayed switches per cycle

0 1 2 3 4

daniel: β_k
daniel-relaxed: β_k
marcolino: delayed switches

0 5 10 15 20 25

(c) Minimum requested and executed dwells

Minimum dwell (μs)

30 20 10 0 -10 -20 -30 -40 -50

3 μs minimum

daniel requested
daniel applied
daniel-relaxed requested
daniel-relaxed applied
marcolino requested
marcolino applied

0 5 10 15 20 25
